Understanding Movies: 14th Edition from Pearson; January 10, 2017. Learn more about Understanding Movies: 14th Edition .Q: Dynamic Zebra striping on fixed width grid I am trying to create a grid that will have 6 boxes on it with a certain width. The boxes can vary in size based on the user's screen resolution. The only solution I could find for this is to use the background property on each box and create some kind of color gradient for 6 divs with background-color: rgb(x,x,x). If you look at this example, there are 6 boxes across but the top and bottom box are the same color. .columns { background-color: #DCB976; width: 100%; } .columns.field { background-color: rgb(76,80,85); padding: 20px; width: 75%; } .columns.field:nth-of-type(odd) { background-color: rgb(88,96,100); } The problem I am having is in IE9. The second column (box) from the top is incorrectly colored on the right side. IE8 works fine f678ea9f9e
